

Hazz Karaoke Hoster Dummy's Guide

Virtual folders and BPM Studio import — version 0.80

The ten minute setup

1. Connect Display 2 and set Windows to Extend these displays.
2. Open Hazz Karaoke Hoster.exe.
3. Import your karaoke and music folders.
4. Press TV and confirm the audience picture is on Display 2.
5. Choose Show > New Show when you are ready.

Add and play a singer

1. Type a singer name and press Add Singer.
2. Search in Karaoke mode and drag the song onto the singer.
3. Press Load Next Singer and check the details.
4. Press green Play. Use Pause when needed and Fade Stop at the end.

Keep the rotation fair

1. Drag singers or use Move Up and Move Down.
2. Set As Next moves the selected singer first.
3. Use Hold if someone is away and Skip Once to pass them once.
4. Open Songs and History to reuse a previous request.

Run interval music

1. Add Music results to Deck 1 or Deck 2.
2. Use Ctrl-click, Shift-click or Select All for several tracks.
3. Pause keeps the exact position and Play resumes it.
4. Use the timeline to seek. Auto Crossfade alternates decks.
5. Single Deck mode turns Deck 2 into a staging side list.

Find and play music videos

- Press Music Video at the top to search only imported video files.
- Add or drag a result to a music deck, or press Space for quick play.
- Singer lists, scrollers, venue text, backgrounds and the logo hide automatically while the video is on the singer display.

Set up the audience display

1. Keep the host controls on Display 1 and send the audience window to Display 2.
2. Choose an image, GIF, silent video or slideshow folder.
3. Use Fit, Fill, Stretch or Center for the background.
4. Move the singer scroller to the top or bottom.

What a virtual folder is

1. It is a named collection of shortcuts to songs already in Hazz.

2. The actual files do not move or get copied.
3. The same song can appear in several virtual folders.

Make an 80s / Rock folder

1. Open Library > Browse Library.
2. Press New Folder, type 80s, and create it.
3. Select 80s, press New Subfolder, type Rock, and create it.

Add several tracks

1. Select All Library Tracks and choose Karaoke or Music.
2. Ctrl-click separate songs, Shift-click a range, or press Ctrl+A for all visible rows.
3. Press Add Selected to Folder..., choose 80s / Rock, then press Add Tracks.
4. Open the Rock folder to check the tracks.

Import BPM Studio folders

1. Close BPM Studio.
2. Choose Import > Import BPM Studio.
3. Select the BPM Studio data/archive folder and confirm.
4. Open Library > Browse Library and expand BPM Studio.
5. Hazz reads recoverable .GRP and .PLG groups. BPM files remain read-only.

Import VirtualDJ or other folders

1. Close the other program.
2. Choose Import > Smart Import > Detect from Application Folder.
3. For VirtualDJ, select its home folder containing database.xml and MyLists.
4. Hazz imports VirtualDJ My Lists, Rekordbox playlist trees and standard nested M3U/PLS/XSPF/WPL exports below the detected application name.
5. Source lists and media remain read-only.

Use and clean up folders

1. Select a folder, then search and send Music to a deck or Karaoke to a singer.
2. Remove from Folder removes selected links.
3. Empty removes direct links but keeps child folders.
4. Delete Selected Folder removes the folder tree and links. Your media files remain.

Fix common problems

1. Click All Library Tracks and clear the search to reset the view.
2. Check Karaoke versus Music.
3. Open the child folder; a parent shows only its own direct links.
4. Maximise the Library Browser if controls are clipped.
5. Read the BPM completion report if a proprietary group could not be decoded.

Finish safely

1. Let current media stop.
2. Close the main Hazz window and confirm shutdown.
3. Wait until Hazz closes before disconnecting a media drive or shutting down Windows.

Import a large BPM Studio library

1. Close BPM Studio.
2. In Hazz choose Import and then Import BPM Studio.
3. Select the main BPM Studio data or archive folder and confirm the preview.
4. Leave the import window open while it reads, indexes, links, saves and finalizes the database.
5. Wait for Import complete, then open Library and Browse Library to check the BPM Studio folders.

Duplicate group files

If several GRP or PLG files have the same name, Hazz automatically uses the newest copy. Importing the same folder again skips unchanged groups. Your BPM Studio files are never edited.
